M4 ROADVIEW DASH CAMERA

INSTALLATION

- 1. Will the installation void any manufacture warranty on the vehicle?**

The AutoXtreme warranty works in conjunction with your vehicle warranty. The product, installation and wiring are all covered by AutoXtreme. For any questions, please contact us directly on 1800 818 288.
- 2. Generally, how long will the installation take for a M4 Roadview Front & Rear?**

We want to give you a installation we can be proud of. You can expect a standard installation to take up to 1.5 Hours.

BATTERY ENDURANCE

- 1. How many hours can the camera store footage on the included memory card?**

The camera can retain approximately the last 4 hours of driving footage.
- 2. How long does parking mode work for to protect my vehicle when I'm away?**

Parking Mode relies on your vehicles battery (or optional Power Pack) however it will turn off if it detects the battery is getting low as a safety precaution.
- 3. Will the camera negatively impact my batteries performance?**

When hardwired (our standard installation option) we use safe guards such as Low Battery Protection, Timer cut-offs and voltage minimums to keep you and your vehicle protected.

VIDEO FOOTAGE / QUALITY

- 1. How wide can a camera see in terms of field of view? Can the video show the sides of the vehicle?**

The front camera has a Field of View of 150 Degrees, it will see around 20% of your dashboard, and generally all 4 corners of your bonnet and objects forward of your bonnet.
- 2. What is the maximum distance that the camera will be able to see a legible license plate?**

All dash cameras have a fixed-focus point of the vehicle directly in front of you (the danger-zone). Vehicles 2, 3 of 4 vehicle length ahead are not considered close enough to be dangerous to your own vehicle, thus the camera lens is "tuned" to read license plates closest to you.
- 3. How well can the M4 Roadview see at night?**

The M4 Roadview dash cameras are some of the best when recording night time and low-light situations, thanks to it's SONY Starvis sensor and a new feature known as HDR. While they won't be able to see in pitch black conditions - they are excellent when lighting is less than perfect.

Recording every drive with unbeatable quality.

M4 ROADVIEW DASH CAMERA

CONNECTIVITY

- Can I connect to the camera if I'm not close to the vehicle?**
 No, you'll need to be in Wi-Fi Range to connect to your dash camera (around 10 metres).
- Does my phone need to be connected at all time?**
 No, the dash camera records all videos to it's own MicroSD card. Your phone simply allows you to save copies from the camera for safe keeping.
- Will my M4 Roadview still record if I leave my phone at home?**
 Yes, the camera records all videos to its own MicroSD card.
- Can multiple phones be connected at the one time?**
 You may have multiple devices saved to connect to your camera, but only 1 at a time can view the footage concurrently.
- Why doesn't the blue GPS light stay solid consistently?**
 GPS requires a clear line of sight to the satellites in orbit to operate. Your GPS position or recorded speed may not be available if you are in a tunnel, underground car park or multiplex.

SETTINGS AND ADJUSTMENTS

- Why does my M4 Roadview say "impact detected while in parking mode" when I see no damage?**
 You may get 'False-Positives' from other shocks to the vehicle, such as closing a car door with force or a hatch/boot. You can adjust the sensitivity from the GNET App.
- Can I turn off the inbuilt microphone on the M4 Roadview?**
 Yes, you can turn off Voice Recording from within the GNET App.
- Why do I have so many "Impacts" or "Event" videos when I'm just driving normally?**
 Sometimes these can also be due to potholes, bumps in the road, hard accelerating or braking. You can adjust the sensitivity from within the GNET App.
(Refer to the full user manual for more information.)
- How do I turn off the M4 Roadview from speaking to me? "ie: GPS Connected, Safe Driving"**
 You can customise the spoken phrases from the camera by using the GNET App.
(See your user manual for detailed information.)

M4 ROADVIEW DASH CAMERA

ACCESSORIES

1. Can I upgrade my SD card, even if they purchase one from a retail store?

Yes, you can upgrade or replace your memory card without voiding your warranty. Just be sure to use an "Endurance" rated MicroSD card (Samsung for the best and most reliable performance). Other rated cards such as a standard Class10 may not be compatible.

GNET APP

1. When connected through the GNET App, why can't I see the map when reviewing footage?

You'll need to use the GNET Viewer app on your PC to view the map data. Remove the MicroSD card from your camera, and into your PC. A copy of the GNET Viewer software will already be located on the MicroSD card.

2. Why does my phone say "Internet may not be available" when connected to the GNET App?

This is normal. The M4 Roadview camera use Wi-Fi, similar to your home internet, however it does not provide an active internet connection.

PLEASE REFER TO THE FULL USER MANUAL IN
YOUR GLOVE BOX FOR DETAILED INFORMATION.
